Wheat, Oats, and Barley—Estimated Yields.

Constat and Statistics Department, Wellington, 16th February, 1943.

The following estimated average yields per acre of wheat, oats, and barley for the season 1942-43 have been compiled from reports furnished by Stock Inspectors of the Department of Agriculture throughout the Dominion, and are now published for general information.

</tbody>
</table>

The above estimates may be compared with last season's actual average yields, which were: Wheat, 33-61 bushels; oats, 48-66 bushels; and barley, 35-99 bushels.

In accordance with the above estimates, the total yield of wheat for the season 1942-43 should be approximately 10,500,000 bushels, as against an ascertained yield of 8,971,244 bushels for the season 1941-42.

The area from which oats were threshed last season represented 29 per cent. of the total area under that crop. Assuming that a similar proportion is threshed this year, the total yield of grain would be approximately 2,900,000 bushels, as against a yield of 2,444,812 bushels for the season 1941-42.

On a similar assumption in regard to barley, the total yield of grain would be approximately 1,155,000 bushels, as against 1,069,860 bushels for the season 1941-42.
