Wheat, Oats, and Barley—Estimated Yields

Census and Statistics Department.

Wellington, 15th February, 1945.

The following estimated average yields per acre of wheat, oats, and barley for the season 1944–45 have been compiled from reports furnished by Stock Inspectors and Departments of Agriculture throughout the Dominion, and are now published for general information.

The above estimates may be compared with last season's actual average yields, which were: Wheat, 39–83 bushels; oats, 46–20 bushels; and barley, 20–49 bushels.

In accordance with the above estimates, the total yield of wheat for the season 1944–45 should be approximately 6,900,000 bushels, as against an ascertainment of yield of 7,208,485 bushels for the season 1943–44.

The area from which oats were threshed for the five seasons ending with 1943–44 averaged 21 per cent. of the total area under that crop. Assuming that a similar proportion is threshed this year, the total yield of grain would be approximately 2,400,000 bushels, as against an estimated yield of 1,834,000 bushels for the season 1944–45.

On a similar assumption in regard to barley, the total yield of grain would be approximately 1,430,000 bushels, as against 832,783 bushels for the season 1943–44.
