Wheat, Oats, and Barley—Estimated Yields

Census and Statistics Department,
Wellington, 5 May 1952.

THE following estimated average yields per acre of wheat, oats, and barley for the season 1951-52 have been compiled from reports furnished by officers of the Department of Agriculture throughout New Zealand, and are now published for general information:

District.	Wheat. Bushels per Acre.	Oats. Bushels per Acre.	Barley. Bushels per Acre.
North Island ..	41	40	46
Marlborough ..	33	35	42
Nelson ..	33	32	43
Canterbury ..	42	48	42
Otago ..	38	47	38
Southland ..	50	62	33
Average (estimated) for New Zealand ..	42	51	42

The above estimates may be compared with last season's actual average yields, which were: Wheat, 43.33 bushels; oats, 51.05 bushels; and barley, 41.22 bushels.

In accordance with the above estimates, the total yield of wheat for the season 1951-52 should be approximately 4,000,000 bushels, as against an ascertained yield of 6,271,928 bushels for the season 1950-51.

The area from which oats were threshed for the five seasons ending with 1950-51 averaged approximately 34 per cent. of the total area under that crop. Assuming that a similar proportion is threshed this year, the total yield of grain would be approximately 2,100,000 bushels, as against a yield of 1,827,953 bushels for the season 1950-51.

On a similar assumption in regard to barley, the total yield of grain would be approximately 1,900,000 bushels, as against 1,902,432 bushels for the season 1950-51.
