Notes.—At stations where departures from normal are in parentheses, the temperature record has been maintained for less than ten years, the rainfall record for less than twenty years. Rainfall normals have been revised and now refer to the standard period 1921-1950.

Where observations are not available for the whole period, or where the site of the raingage has been changed, the normals are partly interpolated.

NOTES ON THE WEATHER FOR SEPTEMBER 1952

General.—The prevalence of winds from an easterly quarter which had been a feature of the previous month was also in evidence for the first half of September. An abrupt change to a boisterous westerly quarter took place in the middle of the month. Temperatures were generally mild except for a sharp cold snap at the beginning of the fourth quarter. Some severe frosts occurred during the month and damaged early vegetable crops in parts of the country.

Rainfall.—The rainfall over the month was generally below normal. There were occasional periods, however, when the rainfall was above normal, particularly in parts of the South Island. The rainfall was particularly deficient in the Taranaki, Nelson, and Westland districts.

Temperature.—Mean temperatures were close to or slightly above normal over the whole country, except in parts of Canterbury and near the centre of the North Island. The snow fall which covered the high country of both islands and lay for a short time on the Canterbury Plains to a depth of a few inches. It was the only appreciable snowfall since mid-June. When skis cleared away afterwards, severe frosts were recorded in most inland districts.

Sunshine.—Most of the country received more than the average sunshine, Taranaki, Nelson, and the Buller and Manawatu districts. The only appreciable deficiency occurred in Hawke's Bay where Napier's sunshine was equivalent to one hour a day below average.

Air Temperatures in Degrees (Fahrenheit).
