From the 20th to the 22nd pressure was high to the east and south, while a depression over the Tasman Sea deepened and moved south, while a depression over the Tasman Sea deepened and moved through Cook Strait. Rain soon became general except in the far south, and there were some heavy falls in Northland and Nelson. During the next two days the depression moved slowly north-eastward from near Cape Palliser, and frequent showers persisted in eastern districts from North Canterbury to East Cape. By the 25th pressure was again high to the east and south, while another deep depression covered the Tasman Sea. A small depression also formed to the north, and in the moist north-easterly airstream-heavy rain again developed in Northland. On the following day

there were violent thunderstorms in this area, with some exceptional downpours, especially near Whangarei. With the eastward advance of the main depression over the Tasman Sea and on to New Zealand from the 27th to the 29th rain spread southward over the remainder of the country, with heavy falls in a number of districts. On the last two days of the month pressure remained low, and a fresh centre formed near Gisborne. The weather was fair in Westland and Canterbury but elsewhere rather unsettled, with some heavy rain from Nanjer to Fast Cane from Napier to East Cape.

M. A. F. BARNETT, Director. (N.Z. Met. S. Misc. Pub. 107)

Decisions Under the Customs Acts

HE following decisions in interpretation of the Customs Tariff are published for public information:

PART I—DECISIONS	IN	INTERPRETATION OF THE TARIFF

Tariff Item No.	Decision	Record No.
