SCHEDULE

GENERAL DESCRIPTION OF WORKS

THE Wheao hydro-electric scheme utilises water diverted from the Rangitaiki River by a canal supplemented by water diverted from the Upper Wheao River by means of a tunnel into the Flaxy Creek reservoir and hence by a canal and penstocks through the Flaxy power station with a head of 30 metres into the main canal. The combined flow is then passed through a generating station in the gorge of the Wheao River with a hydraulic head of 130 metres.

Involved in the scheme are works to:

- a. Dam the Rangitaiki River in Block XIII, Wheao S.D. and divert up to 21 cumecs into a 4800-metre canal terminating at Wheao Power Station.
- b. Dam the Wheao River in Block II, Heruiwi S.D. to form a lake and spillway. Divert up to 12 cumecs through a tunnel into a lake formed by damming Flaxy Creek.
- c. Dam Flaxy Creek in Block XIV, Wheao S.D. and divert up to 8 cumecs through a canal and penstock and utilise the 30-metre head in the Flaxy powerhouse with a 2000 kW generator discharging into the main canal.
- d. Discharge up to 24 cumecs from the canal into 2 penstocks and thence into the Wheao River in Block XIV, Wheao S.D. and utilise the 130-metre head in the Wheao powerhouse with 2 generators having a combined rated capacity of 22,000 kW.

As shown on the plan marked NZE 1027 and deposited in the office of the Electricity Division of the Ministry of Energy at Wellington.

Dated at Wellington this 18th day of February 1982.

W. F. BIRCH, Minister of Energy.
