The Standards Act 1965—Draft New Zealand Standard Specification Available for Comment

PURSUANT to subsection (3) of section 23 of the Standards Act 1965, notice is hereby given that the following draft New Zealand standard specification is being circulated.

Number and Title of Specification

DZ 4203 General structural design and design loadings for buildings. \$11.20

This draft is the proposed revision of NZS 4203:1984. In the preparation of the draft, many individuals and institutions with specialist skills and experience were canvassed for their views and for contributions to the work.

Part D, dealing with wind forces, is not yet available. It will be modelled largely on the new Australian draft which has been written to replace the Australian Code for Wind Forces, AS 1170:Part 2. Drafting of this section will commence shortly.

The draft requires designers to consider two limit states, serviceability and ultimate, with appropriate load factors specified for each. The load factors for the ultimate state are smaller than New Zealand designers are accustomed to, and definitions of some loadings have been altered. These changes should make design appraisals more realistic. They follow trends in other countries, notably in Canada and the United States of America, but studies to support them have been made in New Zealand. To make the design process properly consistent throughout, changes will be needed in materials codes.
