

LOT 015JAE

Vision and sound frequencies shall be maintained within  $\pm 500$  Hz of the nominal carrier frequency. However tighter tolerances may be necessary where precision carrier offset is required by the manager.

The effective radiated power of any emission on 156.8 MHz  $\pm 8$  kHz shall be attenuated to -77 dBW (e.i.r.p.).

The maximum interfering signal shall be 49 dB $\mu$ V/m measured with a horizontally polarised antenna or 54 dB $\mu$ V/m measured with a vertically polarized antenna.
